The Story of Kvit

Freelancers and small shops get paid by sending a link: Stripe, PayPal, Interac.
In BCH the same moment means pasting an address, typing an amount and asking "did it arrive?" in chat.
Kvit is the payment link for Bitcoin Cash. The client pays from any wallet or with WizardConnect, and the ticket punches itself PAID when the chain sees it.

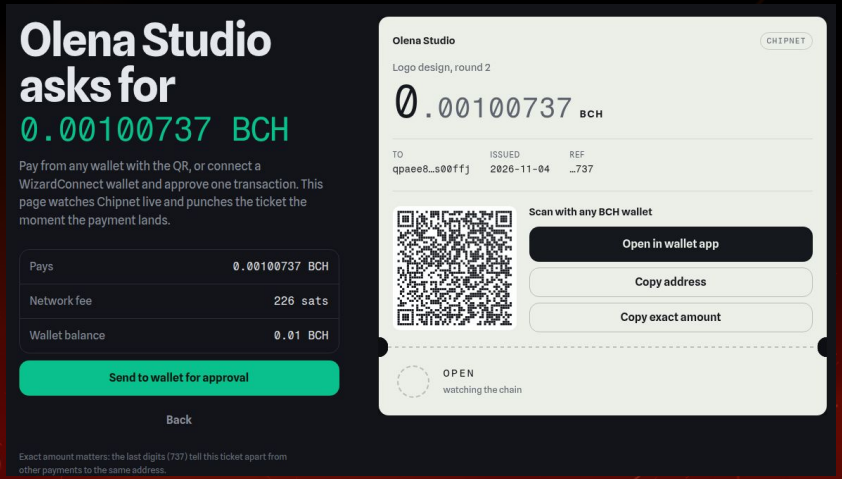

Benefits of Kvit

- A payable ticket in 10 seconds
  - Amount in USD, CAD, EUR or BCH
  - Any BCH wallet by QR, one tap with WizardConnect
- No account, no server, no custody
- Live PAID receipt
  - Block height and transaction link

BCH Usage

Each ticket is paid by a real BCH transaction, built in the browser and signed in the payer's wallet over WizardConnect.

The Vision for Kvit

- Invoices for people paid by link
  - Freelancers, studios, market stalls
  - Next: PUSD stablecoin tickets (CashTokens)
- Shop widget: one script tag on any site
- Business: free core
- Paid branded pages and accounting export

THA YOU!
